**Be prepared this  
Hurricane Season**

## 10 Tips to Prepare for a Hurricane

1. Make an emergency supplies kit with flashlights, a radio, batteries, first-aid kit, toiletries, charging banks for your phone, and rain gear
2. Contact your insurance agent to ensure your home is protected and your premium is paid
3. Take pictures and videos of your home and possessions in case you need to make a claim later
4. Stock up on 3 days worth of water and food. Consider purchasing 1 gallon of water per person per day and non-perishable foods such as canned food, dried fruit, granola bars, and other snacks your family enjoys. You can even freeze some of the gallons of water to help keep refrigerated foods cold in a power outage.
5. Have supplies to prepare your home when a storm is on the way, window and door coverings and a way to store or tie down outdoor furniture
6. Get cash just in case ATMs and banks experience power outages or closures
7. Create an emergency contacts list with family, friends, and neighbors
8. Get an extra supply of your prescriptions and take into consideration other special needs you or your family may need to be prepared for, such as baby or pet supplies
9. Download the FEMA app for information on shelters, updates, and other important information about a storm in your area
10. Know your evacuation route and alternative routes, practice your routes so you are familiar with them, and make sure your car is maintained
